cations in cell expansion, morphology and differentiation (stem cell fate). All adherent cells, but in particular, primary as well as stem cells are sensitive to shear stress. Shear stress generated by large-scale cell culture devices using microcarriers essentially results in growth reduction, cell detachment or cell death (see Â§3b(ii)).

Advances in cell culture: anchorage dependence

The goal of Advances in Cell and Gene Therapy is to become a source for easily comprehensible, unbiased, accurate and up-to-date studies and reviews about the field, along with provocative commentaries from internationally renowned experts. Given the rapid positive advances in the field of cell and gene therapies and the explosive growth of immunotherapy for nonmalignant and neoplastic disorders, the journal's content will be useful for readers worldwide.
