6. Spatial Things, Features and Geometry. In spatial data standards from the Open Geospatial Consortium (OGC) and the 19100 series of ISO geographic information standards from ISO/TC 211 the primary entity is the feature.[] defines a feature as an: “abstraction of real world phenomena”•This terse definition is a little confusing, so let’s unpack it.

Spatial analysis or spatial statistics includes any of the formal techniques which study entities using their topological, geometric, or geographic properties. Spatial analysis includes a variety of techniques, many still in their early development, using different analytic approaches and applied in fields as diverse as astronomy, with its studies of the placement of galaxies in the cosmos, to ...

Density-based spatial clustering of applications with noise (DBSCAN) is a data clustering algorithm proposed by Martin Ester, Hans-Peter Kriegel, Jörg Sander and Xiaowei Xu in 1996. It is a density-based clustering algorithm: given a set of points in some space, it groups together points that are closely packed together (points with many nearby neighbors), marking as outliers points that lie ...

1.. IntroductionClustering is one of the major data mining methods for knowledge discovery in large databases. It is the process of grouping large data sets according to their similarity.Cluster analysis is a major tool in many areas of engineering and scientific applications including data segmentation, discretization of continuous attributes, data reduction, outlier detection, noise ...
