Request PDF on ResearchGate | Basic search of sub automata application to electronic dictionaries | This paper we present a new method to detect and compute a set of sub structures of an automaton.

Basic search of sub automata application to electronic

Linguistically, in using finite automata we can easily describe the relevant information encountered in a language. This results in a compact representation of lexical rules, or idioms and clichés ...

without a noticeable delay in lexical lookup times. However, dictionaries are not the only space consuming resources that are required by state-of-the-art language and speech systems.

Finite Automata for Compact Representation of Tuple

electronic dictionaries must contain information for hundreds of thousands of words. In recent years, perfect hashing techniques have been developed based on finite state automata which enable a very compact representation of such large dictionaries without sacrificing the time required to access the dictionary-

Automata theory is a further step in abstracting your attention away from any particular kind of computer or particular programming language. In automata theory we consider a model of computing. Such a model strips the

computational machineryâ€”the â€œprogramming languageâ€•â€”down to the bare minimum, so that itâ€™s easy
