Nanomedicine, Nanorobotics, Nanofactories, Molecular Assemblers and Machine-Phase Nanotechnology. Publications of Robert A. Freitas Jr.. Peer-Reviewed Papers, Patents, and Conference Publications

NanoPubls - Robert Freitas

Deep hypothermic circulatory arrest (DHCA) is a surgical technique that involves cooling the body to temperatures between 20°C (68°F) to 25 °C (77 °F), and stopping blood circulation and brain function for up to one hour. It is used when blood circulation to the brain must be stopped because of delicate surgery within the brain, or because of surgery on large blood vessels that lead to or ...

Mechanical circulatory support represents an evolving field of clinical research and practice. Currently, several cardiac assist devices have been developed but, among different institutions and countries, a large variation in indications for use and device selection exists.

Impella ventricular support in clinical practice

CARDIAC CYCLE The cardiac cycle consists of nearly synchronized activity of the atria and ventricles. The sequence is essentially the same for the right and left sides of the heart.

APPLICATIONS PRINCIPLES AND CLINICAL MONITORING

Positioning the Patient for Surgery LEARNER OBJECTIVES 1. Describe the desired patient outcomes relative to positioning. 2. Identify intrinsic and extrinsic factors that place surgical patients at risk for tissue damage.

The lungs are the primary organs of the respiratory system in humans and many other animals including a few fish and some snails. In mammals and most other vertebrates, two lungs are located near the backbone on either side of the heart. Their function in the respiratory system is to extract oxygen from the atmosphere and transfer it into the bloodstream, and to release carbon dioxide from the ...
