Sand casting, also known as sand molded casting, is a metal casting process characterized by using sand as the mold material. The term "sand casting" can also refer to an object produced via the sand casting process. Sand castings are produced in specialized factories called foundries. Over 60% of all metal castings are produced via sand casting process.

Graphene is an allotrope (form) of carbon consisting of a single layer of carbon atoms arranged in a hexagonal lattice. It is a semimetal with small overlap between the valence and the conduction bands (zero bandgap material). It is the basic structural element of many other allotropes of carbon, such as graphite, charcoal, carbon nanotubes and fullerenes.

A CBM program consists of three key steps (see Fig. 1): 1. Data acquisition step (information collecting), to obtain data relevant to system health. 2. Data processing step (information handling), to handle and analyse the data or signals collected in step 1 for better understanding and interpretation of the data.

A paper published in the Journal Foundations of Physics Letters, in August 2001, Volume 14, Issue 4 shows that the principles of general relativity can be used to explain the principles of the motionless electromagnetic generator (MEG). This device takes electromagnetic energy from curved space-time and outputs about twenty times more energy than inputted.
