SPARC (Scalable Processor Architecture) is a reduced instruction set computing (RISC) instruction set architecture (ISA) originally developed by Sun Microsystems. Its design was strongly influenced by the experimental Berkeley RISC system developed in the early 1980s. First released in 1987, SPARC was one of the most successful early commercial RISC systems, and its success led to the ...

The PowerPC 601 was the first generation of microprocessors to support the basic 32-bit PowerPC instruction set. The design effort started in earnest in mid-1991 and the first prototype chips were available in October 1992. The first 601 processors were introduced in an IBM RS/6000 workstation in October 1993 (alongside its more powerful multichip cousin IBM POWER2 line of processors) and the ...

### PowerPC 600 - Wikipedia

SMT (Surface Mount Technology) is a packaging technology in electronics that mounts electronic components on the surface of a Printed Circuit Board / Printed Wiring Board (PCB / PWB) instead of inserting them through holes of the board. SMT or Surface Mount Technology is relatively new technology in electronics and provides state-of-art, miniature electronics products

Lights and electronics. General info. The flaming touch and the campfire probably constituted early man's first use of 'artificial' lighting. Prehistoric man, used primitive lamps to illuminate his cave.

### ePanorama.net - Links

Brushless Generators: Among the most common because of their inexpensive construction, brushless generators have the least reliable voltage control. Brushless generators can't react quickly to changing loads, either producing low power (a brownout) or high power. Fluctuations of this nature will cause voltage sensitive equipment like HMI lights to shut off, or will damage sensitive electronics.
