natural object recognitionremoval of pdf

The earliest object relations of the child are relations with images of body parts, which operate, Klein suggests, as "universal mechanisms, " (1932, p. 195 f.n.) without the child necessarily having experienced the actual organs in reality. Only later do the child's images of objects take on aspects of the real objects they represent in the world.

the target object. Aside from this typical scenario, target objects are often natural and are randomly piled in a box, e.g., fruit and vegetables. Natural objects have individual shape variations even though they belong to the same class. The shape variation of an object makes it difficult to train a pose estimatorand evaluate theestimatedpose.

invariant object recognition. First, by training the monkey to rec-ognize novel stimuli instead of objects with which the monkey is quite familiar (faces, for example), it is possible to estimate the degree of view-invariance derived from just one view of the object. Moreover, using a large number of distractor objects allows view-
