Peptides in molecular biology. Peptides received prominence in molecular biology for several reasons. The first is that peptides allow the creation of peptide antibodies in animals without the need of purifying the protein of interest. This involves synthesizing antigenic peptides of sections of the protein of interest.

Cyclic citrullinated peptide antibodies are autoantibodies produced by the immune system that are directed against cyclic citrullinated peptides (CCP). This test detects and measures anti-CCP antibodies in the blood. Citrulline is naturally produced in the body as part of the metabolism of the amino acid arginine.

2 Using variation in point estimates to model uncertainty The literature on the Drake equation contains dozens of point-estimate based calculations for N (the number of detectable civilizations in our galaxy).² These estimates span 11 orders of magnitude: from 3×10^4 to 1×10^8 . While each
