The terms of a geometric series form a geometric progression, meaning that the ratio of successive terms in the series is constant. This relationship allows for the representation of a geometric series using only two terms, r and a . The term r is the common ratio, and a is the first term of the series. As an example the geometric series given in the introduction,

In 3-dimensional geometry, for a finite planar surface of scalar area S and unit normal \hat{n} , the vector area \vec{S} is defined as the unit normal scaled by the area: $\vec{S} = S \hat{n}$. For an orientable surface S composed of a set S_i of flat facet areas, the vector area of the surface is given by $\vec{S} = \sum_i S_i \hat{n}_i$ where \hat{n}_i is the unit normal vector to the area S_i . For bounded, oriented curved surfaces that are ...

1-6 Part1: Hydrometer. Place fluid sample in a cylinder. Measure the API gravity at room temperature using

the appropriate hydrometer. Make sure to follow the instructions of a hydrometer given in this chapter. Use controlled temperature baths to raise the temperature of the fluid sample and take four or five measurements at different temperatures.

A: An adjective that stands in a syntactic position where it directly modifies a noun, as opposed to a predicative adjective, which stands in a predicate position but which modifies the subject of the clause. For example, in the big green house, big and green are attributive adjectives, whereas in the house is big and green, big and green ...
