

the enzymes of biological pdf

Enzymes / ɛˈn z aɪˈm z / are macromolecular biological catalysts. Enzymes accelerate chemical reactions. The molecules upon which enzymes may act are called substrates and the enzyme converts the substrates into different molecules known as products. Almost all metabolic processes in the cell need enzyme catalysis in order to occur at rates fast enough to sustain life.

Laundry detergent, or washing powder, is a type of detergent (cleaning agent) that is added for cleaning laundry. While detergent is still sold in powdered form, liquid detergents have been taking major market shares in many countries since their introduction in the 1950s.

Recently, we discussed herbal blood cleansers and how they work to boost the lymphatic system and actively defend against multiple kinds of cancer in the body. In that article, we mentioned that systemic, proteolytic enzymes also work to clean out the blood, but through entirely different pathways and mechanisms—and to entirely different end results.
