

### the volterra and wiener pdf

The Volterra series is a model for non-linear behavior similar to the Taylor series. It differs from the Taylor series in its ability to capture 'memory' effects. The Taylor series can be used for approximating the response of a nonlinear system to a given input if the output of this system depends strictly on the input at that particular time.

Overview. The most basic type of integral equation is called a Fredholm equation of the first type,  $\phi(x) = \lambda \int_a^b K(x,y)\phi(y)dy + f(x)$ . The notation follows Arfken. Here  $\phi$  is an unknown function,  $f$  is a known function, and  $K$  is another known function of two variables, often called the kernel function. Note that the limits of integration are constant: this is what characterizes a Fredholm equation.

The Journal of Mathematical Analysis and Applications presents papers that treat mathematical analysis and its numerous applications. The journal emphasizes articles devoted to the mathematical treatment of questions arising in physics, chemistry, biology, and engineering, particularly those that stress analytical aspects and novel problems and their solutions.

L'autorégulation est le nom donné à la régulation d'un système par lui-même. C'est le cas de ce qui constitue l'autonomie du système [1] : ce qui fait qu'il se maintient une forme donnée selon des règles de fonctionnement interne. L'autorégulation est parfois liée à la complexité : les systèmes dont l'autorégulation est le plus inattendue sont les complexes.
