McKeever gives us a comprehensive survey of thermoluminescence, an important, versatile, and widely used experimental technique. Bringing together previously isolated specialized approaches, he stresses the

importance of the solid state aspects of the phenomenon.

thermoluminescence (TL)). On the other hand, trap depth is the energy difference between the trap and the corresponding delocalized band. The temperature dependence of trap depth has been reported in recent experiments. We explain the role of trap depth and trap centers in thermoluminescence from semiconductor nanostructures.

Thermoluminescence of Solids. The book contains chapters on analysis and special properties, on instrumentation, and on the variety of defect reaction--using the alkali halides and SiO₂ as examples--that can take place within a material to yield thermoluminescence. Three chapters concerning applications discuss the features...
